

# Turbo Treck IGMP

product information

[www.elmic.com](http://www.elmic.com)

*IGMP (Internet Group Management Protocol) facilitates sending and receiving multicast messages. Unlike broadcast messages, multicast messages are sent to a group of machines that have joined the multicast group (even across routers). The IGMP protocol is used to allow machines to join and leave various multicast groups that are managed by the router.*

Turbo Treck IGMP™ is specifically designed for embedded systems and includes the following features:

- IGMPv1 and IGMPv2 support.
- Full multicast support.
- Uses standard BSD sockets calls.
- High quality.
- Delivered in fully commented source code form.
- Royalty free.
